Allsquare footages and dimensions, including (without limitation) ceiling het sased on preliminary plans and other development plans are proposed and conceptual only and are subject to change and will not necessarily accurately reflect the final plans and specifications. Stated square footages and dimensions are measured to components and other exterior boundaries of the exterior walls and the centerline of interior demising walls between units and in fact vary from the Declaration, which generally only includes the interior airspace between the perimeter walls and excludes all interior structural components and other components and other walls and excludes all interior structural components and other structural components and other structural components and other common exterior airspace between the perimeter walls and excludes all interior structural components and other walls and excludes all interior structural components and other common exterior airspace between the perimeter walls and excludes all interior structural components and other exterior areas are not part of the Unit. So fifts or other variations. Accordingly, the interior air space dimensions of the actual room will be smaller than the product obtained by multiplying the stated length and width. Terraces and other exterior areas are not part of the Unit.

All square footages and dimensions, including (without limitation) celling heights, are estimates based on preliminary plans and will not necessarily accurately reflect the final plans and specifications. Stated square footages and dimensions are measured to change and will not necessarily accurately reflect the final plans and specifications. Stated square footages and dimensions are measured to change and will not necessarily accurately form the square footages and dimensions that would be determined by using the exterior air space between the perimeter walls and excludes all interior structural components and other common elements or shared facilities. The method of measurement used herein is generally found in sales materials and is provided to allow a prospective buyer to compare the Unit determined as set forth in the Declaration refer to the prospectus documents. Measurements of rooms set forth on this floor plan are generally taken at the farthest points of each given room (as described above and as if the room were aperfect rectangle), without regard for any cutouts, soffits or other variations. Accordingly, the interior air space dimensions of the actual room will be smaller than the product obtained by multiplying the stated length and width. Terraces and other exterior areas are not part of the Unit.
